

## MNI POLITICAL RISK ANALYSIS – Global COVID-19 Tracker – October 6

by Tom Lake

### COVID-19 Trends and Developments

- A change in methodology saw **Mexico** register a record number of COVID-19 fatalities and new cases in a 24-hour period on October 5, with 2,789 deaths and 28,115 new cases added to the total. The Ministry of Health has said that some of the additions date back to cases or fatalities recorded in June. Mexico has struggled to effectively record many outbreaks of the virus due to limited testing facilities, with the country's mortality rate standing at 10.4, with 81,877 fatalities from COVID-19 recorded from 789,780 confirmed cases.
- Across the week up to October 5, **France** recorded an average of 82 fatalities per day due to COVID-19, the highest seven-day average since May 23. The sustained increase in fatalities comes as cases continue to mount amid a second wave, with the seven-day average increase in cases (12,330 per day on October 5) the highest on record.
- For the first time the seven-day average increase in new cases across the globe exceeded 300,000 per day on October 5, with an average of 302,415 new cases reported per day globally over the past week. It should be noted, though that this figure is likely to be inflated somewhat by data revisions in hard-hit countries like Mexico and the UK that has seen total caseloads spike.
